# Sentinel Series Ducted Split Cooling Systems

Protect your wine investment. Wine Guardian's Sentinel Series units are the **strongest and most energy**efficient wine cellar cooling systems on the market. They provide **optimal temperature and humidity control** for both commercial and residential cellars with a design that allows for easy installation and service. Ducted Split systems are ideal for wine cellars with little to no extra space for a self-contained Wine Guardian system.

The Sentinel Series ducted cooling systems have a broad range of capacities at wine cellar conditions (55-58°F/12-14°C). An optional humidifier can be installed with the ability to achieve 55-65% relative humidity. For more information about our unit specifications, view our specification sheet.

## Wine is your passion. Preserving it is ours.

#### Versatile

The ducted split systems are our **most flexible** units. These systems give you the ability to install the fan coil and condensing unit in a variety of locations. They are ideal for cellars that have limited space, applications where venting is difficult, and cellars that require longer than recommended duct runs.

#### Bold

A sleek and modern look to compliment any wine cellar design.

#### Efficient

The ducted split system chassis features up to **three times more insulation** than previous versions. New stronger, double wall insulated duct collars insulate 42% more to help reduce temperature loss and condensation even in the most demanding environments.

### Comprehensive

Our cooling systems offer a **wide range of control**, so you can match our units to your specific needs. Up to 3 optional remote sensors and 2 remote interface controllers with Wireless2Base<sup>™</sup> technology can be added to your unit for easy monitoring and control of your cellar or in whatever room is most convenient for you.

#### Strong

The Sentinel Series is made of the highest UL rated composite material, features an all aluminum chassis, and contains coated coils to ensure **product durability**. It is five times stronger than our previous model. The unit's construction prevents dents and scratches from installation and shipping.

### Accessible

Composite multi-panel design with integral captive quarter-turn fasteners allows for **ease of access** and serviceability. Interchangeable duct collars and solid panels can be simply configured during installation.

#### **Options and Accessories:**

- All Wine Temperatures Bundle
- Extreme Climate Protection Bundle \*
- Remote control, monitoring and sensing
- Duct kits and grilles
  - Extended warranties
  - Humidification

\*Not all options are available for all units. Contact a distributor for more information.
