

USE

The Corvi Cooler's mass helps maintain temperature, allowing you and your guests to linger over your wine. To use, chill your wine or champagne in the refrigerator until it reaches the proper temperature. Then place the bottle in our elegant CWC or CCC, which will help preserve its temperature.

To maintain temperature for an extended period, you may pre-chill the Corvi Cooler in the freezer before use. Then insert your favorite wine or champagne bottle that has been chilled to the proper temperature in your refrigerator and enjoy!

CARE & SAFETY INSTRUCTIONS

To clean, use mild soap and water only. Remove excess moisture with dry, lint-free towel.

Each concrete piece is unique; bubbles and small imperfections are part of the pieces's singularity and character. Concrete is a live material. Your piece will age and change over time with exposure to air and with wear, just as concrete does in monuments and buildings. Chipping is possible when a piece makes contact with a hard surface. To avoid chipping, handle pieces with care.

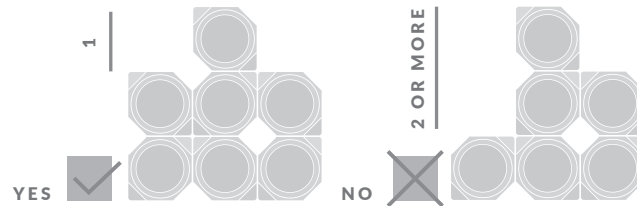

Our concrete is lightly sealed so it can be cleaned with a duster or damp cloth. Because we maintain some of the material's porosity to preserve its characteristic look and feel, exposure to oily or acidic liquids may cause stains.

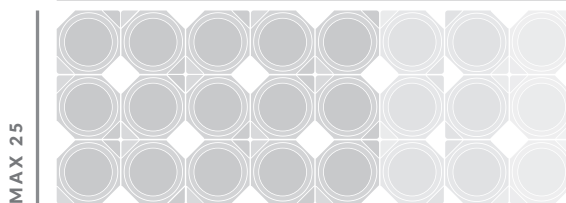

CONFIGURATIONS

Individual Corvi Coolers can be stacked in an infinite array of configurations to create your own custom wine cellar. To ensure stability stack only on level, secure surfaces. Equal numbers of coolers plus no more than one additional cooler may be stacked adjacent to each other. See diagrams at bottom of this page for a depiction of proper configurations.

Note Due to weight and friction no bracing is necessary as long as these configurations are followed.

CORVI Champagne Cooler

Designed by Francisco Corvi

The Corvi Champagne Cooler builds on the reputation of our Corvi Wine Cooler with a size and mass designed specifically for the needs of champagne. The larger size accommodates champagne bottles, while the heavier mass is designed to better preserve the lower serving temperatures of champagne.

FRANCISCO CORVI

Industrial Designer / Argentina

PPi3D is a Buenos Aires-based creative design studio founded by Leonardo Anbinder and Francisco Corvi known for producing visually striking and

unique contemporary forms. Each piece is the result of a harmonious blend of its creators' unique expertise and individual philosophies.

Francisco's work is shaped by his natural inquisitiveness about how things come together. "Every toy I had as a child was disassembled and assembled again using other things. This curiosity was my first design influence," he says. This desire to explore new ideas and push the boundaries of materials results in distinctive creations featuring beautiful, functional elements that are aesthetically and structurally built to withstand the test of time.
